### DETAILED ACTION

This action is responsive to communications: Amendment B, filed on 5/29/2003.
 This action is made final. Claims 1-5 and 7-17 are pending. Claim 6 is cancelled.

## Response to Arguments

2. Applicant's arguments filed on 5/29/2003 regarding claims 1-5 and 7-17 have been fully considered but they are not persuasive.

As per applicant's arguments regarding "Applicant is unable to find any teaching or suggestion of using such a 'layout data type' in similarity searching in the proposed combination of Nelson and Herz" have been considered but are not persuasive.

Nelson discloses a layout data type information indicating the arrangement of the different data type within the query document (Nelson, Fig. 1-3, col. 2, line 28 – col. 3, line 18, col. 6, lines 35-65, col. 9, lines 18-53, "The position data may be character position, byte offset, word count, or any other useful unit indicating relative location of the component within the document"). Data type is a "class of data, characterized by the members of the class and the operations that can be applied to them. For example, character type, enumeration type, integer type, logical type, real type" ("The Authoritative Dictionary of IEEE standards terms", seventh edition, ISBN 0-7381-2601-2). It is obvious that the position information of Nelson is a data type, which indicates the layout of different data within the query document.

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-5 and 7-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nelson et al. ["Nelson", 6,243,713 B1] in view of Herz [6,460,036 B1].

As per claim 1, Nelson discloses a method of searching a database to find documents similar to a query document, comprising:

decomposing the query document into elements of different data types, including a layout data type indicating the arrangement of the different data type within the query document (Nelson, Fig. 3-5, col. 5, lines 52-55, "Compound documents are separated into constituent multimedia components of different data types, such as text, images, video, audio/voice, and other data type", col. 9, lines 18-53);

for one or more of the elements in a first data type, conducting a first data type similarity search to return match results from the database for the one or more elements in the first data type; for one or more of the elements in a second data type, conducting a second data type similarity search to return match results from the database for the one or more elements in the first data type (Nelson, col. 22, lines 31-34, "require the different types of multimedia components to be separately scored and evaluated, with separate queries"); and

Page 3

Art Unit: 2172

combining the match results from the first data type similarity search and the second data type similarity search with the layout data type to provide query document match results (Nelson, Fig. 3-5, col. 9, lines 18-53, col. 22, lines 31-34, "the results of which are combined").

Nelson does not explicitly disclose the multimedia document is submitted by a user. Herz discloses a profile searching method that the query document is submitted by a user (Herz, col. 56, lines 23-25, "using copies of the profiles of target objects or target clusters that the user indicates are representative of his or her interest"). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Herz with Nelson in order to free the burden of a user by allowing the user to submit a query document instead of typing the query.

As per claim 2, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses one of the data types is representative of text (Nelson, col. 5, lines 52-55, "Compound documents are separated into constituent multimedia components of different data types, such as text, images, video, audio/voice, and other data type.").

As per claim 3, Nelson and Herz teach all the claimed subject matters as discussed in claim 2, and further discloses a plurality of the data types are representative of text, separate data types of the plurality being representative of different functional blocks of text (Nelson, col. 5, lines 52-55).

As per claim 4, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses one of the data types is representative of pictorial images (Nelson, col. 5, lines 52-55).

Art Unit: 2172

As per claim 5, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses one of the data types is representative of graphical images (Nelson, col. 5, lines 52-55).

As per claim 7, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses the step of similarity searching to return match results is carried out, separately, for a plurality of elements having between them more than two data types (Nelson, col. 22, lines 31-34).

As per claim 8, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses all features of a common data type in the document are treated as one element (Nelson, col. 6, lines 1-34).

As per claim 9, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses spatially distinct features of a common data type in the document are treated as separate elements (Nelson, col. 6, lines 1-34).

As per claim 10, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses elements are user selectable or deselectable for the step of similarity searching (Nelson, col. 18, lines 1-10).

As per claim 11, Nelson and Herz teach all the claimed subject matters as discussed in claim 1, and further discloses the similarity searching results for separate elements are weighted before combination (Nelson, col. 22, lines 31-34).

As per claim 12, Nelson and Herz teach all the claimed subject matters as discussed in claim 11, and further disclose weighting is user selected (Nelson, col. 22, lines 1-6).

Art Unit: 2172

As per claim 13, Nelson and Herz teach all the claimed subject matters as discussed in claim 11, and further discloses weighting is attributed according to a determined significance of each relevant element in the document (Nelson, col. 21, lines 1-53).

As per claim 14, Nelson discloses a method of searching a database to find documents similar to a query document, comprising:

decomposing the query document into elements of different data types (Nelson, col. 5, lines 52-55, "Compound documents are separated into constituent multimedia components of different data types, such as text, images, video, audio/voice, and other data type.");

determining a layout element in a layout data type from the spatial arrangement of the elements in the document; and for the layout element, conducting a layout similarity search to return match results from the database for the layout element (Nelson, Fig. 3, col. 6, lines 35-65).

Nelson does not explicitly disclose the multimedia document is submitted by a user. Herz discloses a profile searching method that the query document is submitted by a user (Herz, col. 56, lines 23-25, "using copies of the profiles of target objects or target clusters that the user indicates are representative of his or her interest"). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Herz with Nelson in order to free the burden of a user by allowing the user to submit a query document instead of typing the query.

As per claim 15, Nelson and Herz teach all the claimed subject matters as discussed in claim 14, and further discloses the layout similarity search involves searching against templates representative of different document types (Nelson, col. 8, lines 21-67).

Art Unit: 2172

As per claim 16, Nelson and Herz teach all the claimed subject matters as discussed in claim 14, and further discloses the elements include elements of separate data types representative of different functional blocks of text (Nelson, col. 5, lines 52-55).

As per claim 17, Nelson and Herz teach all the claimed subject matters as discussed in claim 14, and further discloses the elements include elements of data types representative of images (Nelson, col. 5, lines 52-55).

### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Syeda-Mahmood (6,178,417) discloses method and means of matching documents based on text genre.

Bobrow et al. (6,562,077) disclose sorting image segments into clusters based on a distance measurement.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2172

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.

**Contact Information** 

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Chongshan Chen whose telephone number is (703) 305-8319.

The examiner can normally be reached on Monday - Friday (8:00 am - 4:30 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Kim Y Vu can be reached on (703)305-4393. The fax phone numbers for the

organization where this application or proceeding is assigned are (703) 746-7239 for regular

communications and (703) 746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703)305-3900.
